

# OE NTZ Replacement Element Prevents Cooler Flow Inbalance

## Ford TorqShift® 5R110W 2003-2007

**OEM NTZ filter element**

- OE Specified Replacement
- Meets manufacturer's transmission specifications for flow, temperature, pressure and filter efficiency.
- Covered under original OE component warranty
- Maintains the proper cooler inlet flow and pressure for system flow balance
- Eliminates water and chemical acids
- Manufactured by the OE supplier whose quality system is registered by QS 9000/ISO14001/TS16949
- Filter comes packed in a clean plastic bag with full instructions, including proper procedure for element change

**Other Aftermarket Alternative**

- Utilizes a filter media that allows 30% more flow over the filter system, causing an inbalance in the cooler circuit flow, which results in a fluid temperature increase that can shorten the transmission and fluid life up to 50%.
- Not designed to operate to Ford specifications for TorqShift® transmission
- No warranty offered
- Element is subject to environmental contamination due to improper packaging
- During cold weather, cooler waxing can occur, resulting in elevated transmission temperature
- Minimal cost savings when compared to risk of damaging transmission
